

161 Properties Of Solutions Chemistry

Chemistry is the natural science involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances.

Silicates. The first silicate products, such as a pottery, were obtained at the dawn of civilization. The age of the earliest fragments of man-made burnt clay, according to archeologists, is about 15 century BC, whereas the first industrial pottery has been produced in Egypt in 5000 BC.

There is intense interest in graphene in fields such as physics, chemistry, and materials science, among others. Interest in graphene's exceptional physical properties, chemical tunability, and potential for applications has generated thousands of publications and an accelerating pace of research, making review of such research timely.
