This page looks at the basic ideas underpinning the idea of a chemical equilibrium. It talks about reversible reactions and how they behave if the system is closed. This leads to the idea of a dynamic equilibrium, and what the common term "position of equilibrium" means. A reversible reaction is one

Introductory Unit - The Periodic Table. The modern version of the Periodic table classifies elements into groups (columns) and periods (rows). Elements in the same group have a gradual change in physical properties such as melting point, boiling point and density as the group is descended and form compounds of similar chemical formulae.
