

Lesson Practice A Similarity Transformations

The term "similarity transformation" is used either to refer to a geometric similarity, or to a matrix transformation that results in a similarity. A similarity transformation is a conformal mapping whose transformation matrix A^{-1} can be written in the form $A^{-1} = BAB^{-1}$, (1) where A and A^{-1} are called similar matrices (Golub and Van Loan 1996 ...

An affine transformation is any transformation that preserves collinearity (i.e., all points lying on a line initially still lie on a line after transformation) and ratios of distances (e.g., the midpoint of a line segment remains the midpoint after transformation). In this sense, affine indicates a special class of projective transformations ...
