

Roots Stems And Leaves Biology

Underground stems are modified plant structures that derive from stem tissue but exist under the soil surface. They function as storage tissues for food and nutrients, propagation of new clones, and perennation (survival from one growing season to the next). Types include bulbs, corms, rhizomes, stolon, spindle - shaped and tubers

Underground stem - Wikipedia

At least some plant cells contain photosynthetic organelles which enable them to make food for themselves. With sunlight, water, and carbon dioxide, the plastids make sugars, the basic molecules needed by the plant.

Plant - Simple English Wikipedia, the free encyclopedia

This could be set up as a circus of observations - depending how many of the plant setups you choose to use. Or you could run the 'dye in stems' section as a class practical, with the 'plant in polythene bag' and/ or the 'cuttings in dye and water' as demonstration practicals.

Observing water moving through plants | Nuffield Foundation

BIOLOGY OF PLANTS. Plants are alive, just like people and animals. How do we know this? Living things all do certain things: They grow and die. They need energy, nutrients, air, and water.

Biology of Plants: Introduction - MBGnet

Roots vs. Shoots. Not a lot of people are familiar with the different parts of the structure of a plant. These are usually discussed during biology classes and hold no significance to people who do not have a green thumb or those who are not interested in plants altogether.

Difference Between roots and shoots | Difference Between

Differentiation in plants refers to the processes by which distinct cell types arise from precursor cells and become different from each other.

Differentiation in Plants - Biology Encyclopedia - cells ...

In a vascular plant, the stele is the central part of the root or stem containing the tissues derived from the procambium. These include vascular tissue, in some cases ground tissue and a pericycle, which, if present, defines the outermost boundary of the stele.

Stele (biology) - Wikipedia

The Great Plant Escape Start an online adventure to learn more about parts of plants and how plants are important to us. There are activities and lots of graphics.

A tropism is the innate ability of an organism to turn or move in response to a stimulus. As opposed to a learned ability, innate reactions are genetically programmed.

Tropism - Definition, Types and Examples | Biology Dictionary

Tissue: Tissue, in physiology, a level of organization in multicellular organisms; it consists of a group of structurally and functionally similar cells and their intercellular material. By definition, tissues are absent from unicellular organisms. Learn more about tissues in this article.
